

Project Initialization and Planning Phase

Date	3-7-2026
Roll ID	TYA105
Project Name	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	3 Marks

Customer Problem Statement

I am

Educational policymakers, school administrators, researchers, and decision-makers who need reliable insights into AI adoption in education across different countries and regions.

I'm trying to

Understand the current level of AI adoption in education, compare adoption across countries and regions, identify trends over time, and evaluate factors influencing AI implementation

But

The available educational AI data is scattered, difficult to interpret, and lacks interactive visualizations that support quick and informed decision-making.

Because

There is no centralized analytical dashboard that provides meaningful insights into AI adoption trends, student and teacher AI usage, regional comparisons, urban-rural differences, and AI tool adoption.

Which makes me feel

Challenged in making evidence-based educational policies, planning AI implementation strategies, and identifying areas that require improvement.

❖ Problem Statement

Educational institutions and policymakers require a comprehensive analytics platform to understand global AI adoption in education. However, existing datasets are difficult to interpret without proper visualization. There is a need for an interactive Tableau dashboard that enables users to explore AI adoption trends, compare countries and regions, analyze stakeholder engagement, and support data-driven educational decision-making.
